1: Jochelson E-5 (1900-01) 1908 RY4 Koryak RY4

The Koryak extend their friendship also to the Russians, whose presents [609]
generally consist of tea, tobacco, baked bread, biscuits, flour, and other imported articles. 572 574

A Koryak, on his arrival in a settlement or camp, makes his headquarters in the house or tent of a friend, and while there partakes of the meals as a member of the family. The lads feed his dogs or guard his reindeer. Among the Maritime Koryak a place is reserved for his bed on the platform in the front part of the subterranean house, while among the Reindeer Koryak he passes the night in the host's own sleeping-tent or in a separate sleeping-tent. In ancient times the "friends" were met with fire from the hearth, obviously in demonstration of the amicable feelings of the hearth as the family protector, and of the host. At the present time, these friends, as all other visitors, are met with the greeting "Eh, ye'ti!" which means simply "Ah, thou hast come!" to which the visitor answers, "Ye'ti." 437 [576]

Clearly, the fraternities as a social institution have a utilitarian basis; but we also find certain manifestations of a social feeling of altruistic character. Thus the announcement of the death of a member of the family, made by the relatives to all the inhabitants of the settlement or of the surrounding camps, is obviously intended as a warning of the danger from evil spirits, which caused the death. The neighbors thus informed at once take protective measures.[1] 761

As a rule, material support is offered by the more prosperous only to relatives. In times of famine, however, the provisions are divided indiscriminately among all the inhabitants of the settlement who are in need. 476 731

If we disregard for a moment the influence of the Russians on the social life of the Koryak, it can, I think, be asserted that the independent development of social forms among the Maritime Koryak could hardly have reached the stage at which the nobility and the common people would appear as two sharply defined hereditary classes. The brave warrior and the clever hunter, who, as a rule, ranked above the masses as protectors and providers of the group, lost their influential positions during famines in years when huntin and fishing had been unsuccessful. Not so with the Reindeer Koryak. 174 565 558

The concentration of fortunes in the form of large herds in the hands of single individuals, and the perpetuation of these fortunes through inheritance, might have furthered social differentiation, and led to the formation of aristocratic families. In ancient times the possessor of a large herd had to be not merely a good shepherd, but a warrior well able to protect his herds against the attacks of enemies. Around him as a natural protector would cluster, first of all, groups of relatives, but also neighbors (na'mtumgin, "neighbor in camp") possessing but small herds or no herds at all. These people would become herdsmen subordinate in position, while it devolved on 174 565 556

224 found side by side with the communistic principle, but that at the present time the principle of work has become predominant. As I have said before,[1] not all among the Maritime Koryak are owners of skin boats. For the hunting of sea-animals in boats, many men are required, and the owners of boats are eager to accept the services of those who do not own any. The relations of these helpers to the owner of the boat are not those of hirelings and master, but of associates with equal rights. The catch is divided into equal parts. In order to obtain more men for his boat, the owner at times takes for himself less than his just share. The participants in his chase, on their part, contribute their own harpoons, and supply the owner with thongs and skins for repairing the boat. When fish and seals are caught with nets, the owners of the latter form groups of several families at each net, among whom the haul of the net is equitably divided. Some individuals prefer to hunt and fish by themselves. Needed assistance is offered mostly to relatives through blood or marriage. Workmen hired for a certain yearly compensation can be found only in the Russianized settlements. Men serving for their brides occupy the position of free workmen; if, however, they have to support aged parents, a share in the products of hunting and fishing is accorded to them. During the exchanges with tradesmen it becomes evident that the hunter's right or ownership is more sharply defined in reference to products of fur-hunting than in reference to objects of consumption. At home the hunter deals with the skins of the fur-animals he has killed more independently than does the fisherman with the fish he has caught, exchanging them frequently for articles he personally needs.

476 437 [465]

463 The position of herdsmen among reindeer-owners is now essentially the same as before;[2] but, if a herdsman lives with his family in a separate tent, the number of reindeer he will receive during the year to kill is often agreed upon in advance.

177 592 596 Russian influence has further manifested itself in the tendency of large families to split up into smaller ones. The Koryak assert that in ancient times the houses were more spacious, and that all relatives, to the number of forty or more individuals, lived together in one dwelling. In houses of the Maritime Koryak I have never seen more than fifteen individuals. Among the Reindeer Koryak I found twenty-five individuals in one tent, thirteen of whom, however, were herdsmen and their families. Besides, the sisters and daughters of the master had married into other families, which is of common occurrence, although in ancient times families related by marriage not infrequently lived together. In this case, however, the elder brother, with his family and herds, had also separated from the group, which in ancient times happened very seldom. But nowadays I have frequently met cousins or brothers

[1] See p. 358.

In summer, during the fish-runs, all reindeer-breeding Alyutortsy migrated to the mouths of rivers, where they lived with their sedentary kinsmen and worked with them, preparing stocks of fish for the winter. The reindeer herds remained at this time in the care of herdsmen—the boys of the family. This second type of Koryak reindeer-breeding originated much later than the first.

The hunting of sea animals (various species of seal and white whale) was the principal occupation of the northern sedentary Koryaks, who lived on the coast of Penzhina Bay: Kamentsy, Parentsy, Itkantsy. It also played an important role among the rest of the sedentary Koryaks: the Kereks, Apukintsy, Palantsy, Karagintsy, and sedentary Alyutortsy.

Sea hunting was done during two seasons: spring and fall. The spring season began in mid-March and ended in the latter part of June.

The hunters, armed with rifles and spears, drove out in parties of 78 men, or more, by dogsleds on the sea ice, 5 to 10 kilometers from shore. The seals, which climbed out on the ice, were shot with rifles. The kill was loaded on the sled, and the hunters returned to their village either the same or the following day, after a night on the ice. In a party of 78 men, 2 usually had guns, while the rest brought in the catch, loaded it on the sled and transported it; some were simply onlookers. In May, when open water appeared among the ice floes, sea hunting was done in baydars (skin boats).

The fall season began in mid-September and ended in the latter half of November. The fall hunting was also done in baydars and barkasy [flat-bottomed plank boats]. The animals were caught with nets of sealskin strips.

Long ago, the Koryaks hunted whales. According to legends and literary sources of the 18th century, the hunt was conducted with a huge net, woven of thick strips of leather. Large stones were used as sinkers. The net was attached to coastal cliffs and crags. Dozens of baydars, each with more than 10 hunters, armed with harpoons, sailed out into the sea. The hunters drove the whale into the net, in which it became entangled. The heavy sinkers made it impossible for the whale to swim out into the sea with the net. The hunters showered him with spears. Wounded and exhausted, the whale died, and the hunters joined forces to pull him ashore. The Alyutortsy also used joined boats instead of baydars in hunting whales.

The skins of sea animals were used for straps and boot-soles. The meat and blubber were eaten and stocked. The blubber also provided light. To the Kamentsy, Parentsy and Itkantsy, the products of sea hunting—blubber, skins, and sometimes meat as well—served as the principal media of barter with the reindeer-breeders, from whom they obtained deerskins and meat.

Fishing had long been the main occupation of the eastern sedentary Koryaks of the Bering Sea coast: the Karagintsy, the sedentary Alyutortsy and the Apukintsy. Fishing was also important to the western sedentary Koryaks—the Palantsy, and the northern ones—the Kereks—and somewhat less for the settled Koryaks on the Penzhina—Kamentsy, Parentsy and Itkantsy. Fishing was done throughout the summer and early fall season—from mid-June to the middle of September.

The most widespread method of fishing was by means of barriers. The river was fenced off from either bank with two barriers of stakes and twigs. At the place where they met, the fishermen attached under the water a chiruch (a sack-net) or a "muzzle," made of strips of wood, laths or twigs. Such barriers were set in shallow places, where the fishermen could work during shoal runs without boats or kungasy [sailboats]. The "muzzles" were emptied several times a day. During the heavy runs of fish (Siberian salmon and other migrating salmon species), the Koryaks moved to the mouths of rivers. Here groups of households combined into cooperatives and fished

17:Antropova E-4 (no date) 1964 RY4 Koryak RY4

with large nets sewn together from the smaller ones they owned individually.

Other methods of fishing included fishing with the aid of an iron hook (marik) and "dipper" nets. The fisherman stood up to his knees in water, holding in his hands an implement that looked like a large sack-net on a long pole. Sighting a fish, he quickly directed the net towards it, scooping it up and throwing it out on the gravel shore. This method was used in the beginning of the fish-run, before the cooperative set to work.

Most of the catch went into the making of yukola. The fish were disemboweled and hung to dry on special racks. The yukola (fish dried in the sun and the wind) was put away in storehouses—tents on high piles, covered with dry grass. Yukola was usually made by women, while fishing was done chiefly by men. The yukola was the principal food of the people all year; it was also used as feed for the dogs, in addition to "pickled fish"—freshly caught fish piled into a pit, covered with earth, and left to ferment until needed.

An important auxiliary occupation among both sedentary and nomad Koryaks was hunting, which was done solely by men. The fur animals hunted were fox, wolverine, otter, hare and ermine.

Fur-animal hunting was most important among the Palantsy, who lived in a region abounding in Kamchatka sable. These were trapped in nets. Other animals were hunted with guns. Foxes and smaller animals—yevrazhka hamster and ermine—were caught in springtraps. The latter two were usually hunted by adolescent boys. Hares and partridges were caught with a noose. In early spring, many hunters took meat animals—bears, Siberian marmot, wild reindeer and mountain sheep. Tundra animals were usually hunted without the aid of hunting dogs, which were owned by relatively few hunters.

An important role in Koryak economy was taken by the gathering of wild plants. The gathering of edible roots, grasses and berries was women's work. Roots were obtained chiefly from mouse-nests. Searching out a mouse-nest, the woman dug it up with a special wooden hoe and took from it the store of edible roots prepared by the mice. The berries gathered were blueberry, cloudberry and crowberry.

Grass was used to make inner lining for boots, and was also woven into mats, baskets, bags and purses. The weaving of variously shaped baskets, from those in the shape of bowls and trays down to small oval boxes with lids, and also bags of various shapes and sizes was especially developed among the Karagin and Alyutor women.

The men widely engaged in carving bone and the horns of wild sheep.

One of the villages of the northern coastal Koryaks—the village of Paren' on Taygonos Peninsula, was long known for blacksmithery. The Paren' blacksmiths reforged accidentally gotten pieces of iron into knives famed throughout the Koryak territory and beyond it. Even in the early years of the current century, the local Koryak population preferred them to imported Russian and American knives.

Housing

The dwelling of the reindeer-breeding Koryaks (yaranga) was a tent, similar to the Chukchi yaranga (called yayan'a in the Chavchuven dialect, and raran'a in the Alyutor dialect). Cylindrical at the base and conical at the top, it had a framework of poles and was covered with reindeer skins, with the fur outside. The pelts to be used for covering the yaranga were scraped a little; some of the flesh side was peeled off, then it was kneaded and smoked to make it waterproof. For summer dwellings, the hair was removed, or else worn, old coverings were used.

17:Antropova E-4 (no date) 1964 RY4 Koryak RY4

relations, especially among the coastal Koryaks. Thus, related families of Alyutortsy combined in summertime for common fishing. The catch was divided equally among them. Their sea hunting was also collective. From seven to eight persons went out to hunt together. On returning to the village, they divided the meat and fat of the seals killed during the hunt in equal shares among all the residents of the village; only the skin of the bearded or common seal went to the man who killed it. Kamentsy also shared equally the meat and fat of the seal they hunted in common, but sometimes the owner of the boat took a larger share.

The reindeer-breeding Alyutortsy also combined into 4-6 kindred families, which nomadized and herded their deer in common. These were productive associations of a temporary nature, similar to the temporary associations of fishermen and sea hunters.

According to 18th-19th-century data, the coastal Koryak family was already economically self-sufficient at that time. Individual families owned boats, nets, and traps, which they were free to use at their own discretion, down to selling them to other families. But there were also cases where nets belonged collectively to related families.

Even by the time of the Revolution, social inequality was not sharply expressed among the coastal Koryaks. They lived predominantly in a subsistence, consumption economy, with fur as the only commodity for sale.

The situation among the Chavchuvens was quite different. Even in the early part of the 18th century, Krasheninnikov wrote about the wealth of individual reindeer-breeders. Thus, already there was sharp property differentiation among the reindeer-breeders at that time. The process of stratification became still more intensified in the 19th century in connection with the development of trade.

At the time of the Revolution, there were among the reindeer-breeders men of great wealth, who owned herds of thousands of reindeer. On the other hand, there were householders owning only 10-15 reindeer and therefore compelled to work for the rich as herdsmen. Very often, distant relatives of the owners also became herdsmen; in such cases, family relations served as a cover for the usual exploitation.

In exchange for his hard labor in tending the reindeer, the herdsman received from his master only meat for his food and skins for his clothing, with the quantity of the compensation dependent entirely on the will of the master. The encampment of the rich Koryak usually included several families of herdsmen entirely dependent on their master economically and subject to his will in everything. The herdsmen could not kill a reindeer for food without the master's permission, and therefore often went hungry. In addition to tending reindeer, they performed a variety of other tasks: prepared firewood, brought water, hunted fur animals. The rich reindeer-breeder disposed of the labor of the herdsman's family as well. The herdsman's wife and daughters processed the reindeer skins for the master, made thread of reindeer sinew, sewed clothing and boots of reindeer-skins, etc. It was difficult for a herdsman to leave his master. Although custom permitted the changing of masters (in the fall, when the season began), in reality this was difficult to accomplish. The chief obstacle was the "debts" which the herdsman had managed to incur with his master: during the year he obtained from the latter small quantities of tea, sugar, flour, cartridges, etc. The master was not bound to provide imported goods; he merely had to "feed" his herdsmen. For a year's work, the herdsman received a female reindeer. As a rule, each herdsman owned 5-6, and only occasionally 10 or more, reindeer, earned by several years of hard labor. Naturally, with such a small number of reindeer it was impossible to live independently.

17:Antropova E-4 (no date) 1964 RY4 Koryak RY4

Among the reindeer-breeding Alyutortsy there were associations of families with small reindeer herds, bound by blood or affinal kinship. The typical correlation of reindeer in a herd owned in common by five households was: 5% + 10% + 20% + 25% + 30% = 90%. The other 10% of the herd usually belonged to sedentary relatives of the reindeer-breeders. Property inequality among the Alyutortsy was less pronounced than it was among the Chavchuvens. There were only a few cases where one of the co-owners in the association owned as much as 60% of the combined herd.

Thus, the backward forms of the Koryaks' subsistence economy fostered the preservation of communal relations among them.

The existence of clan relations among the Koryaks in the past is indicated by a number of aspects of their social life, and particularly by their family and marital ceremonials, which persisted into the first quarter of the 20th century. Among the survivals of clan organization we must note the custom of mutual assistance among related families, the custom forbidding outsiders to use the fire of an unrelated family, the residence (according to 18th-19th-century sources) of several related families in the same dwelling, the custom of vendetta, which survived until the early years of the 20th century, etc. In addition, the coastal Koryaks still retained traces of the institution of elders. In some of the villages there were persons called nym'elgen-an—"the guardian of the place," "the guardian of the past." This position could be held only by a man who was considered a descendant of the founder of the village. Each group of Koryaks headed by a nym'elgen-an had its own wooden image. In addition to the general designation of nym'elgen, the image also had its own name. Some of these names ("swallow," "duck") were of totemic character. Sacrifices were made to the images; they were "fed" and "dressed" in grass clothing.

Family relations at the end of the 19th century were based on patriarchal norms (patrilineal kinship, inheritance from father to son, patrilocal marriage). Along with this, there were survivals of matriarchy, the most distinct of which was the granting of children to the mother in case of divorce.

Among the remnants of extinct forms of group marriage were the surviving custom of the sororate, according to which a widower must marry the younger sister, younger cousin or niece of his dead wife, and the custom of the levirate, according to which a younger brother had to marry the widow of his older brother; in the absence of a brother, this duty devolved on the nephew or cousin of the dead husband. However, such survivals of group marriage as the Chukchi "association by wife" were already unknown among the Koryaks in the 18th century.

The most common method of contracting a marriage was by working for the wife. Under this custom, the groom had to work from 2-3 months to three years in the family of his future father-in-law, taking part in tending reindeer and other tasks. After the expiration of the work period, the groom performed the so-called ceremony of "catching the bride": the bride ran about in the house, and the groom had to catch her, tear her clothing, and touch her bare body. The bride's relative's present at the ceremony tried to hinder this in every way, beat the groom with twigs, pushed him away, and so on.

According to Koryak religion, the whole world was inhabited by a multitude of harmful beings—nin'vit's. The nin'vit's were invisible, but could become visible if they chose. They appeared to people in the form of anthropomorphic creatures, with huge ears, burning eyes (sometimes with one eye, sometimes with three), with long sharp teeth and a body covered with thick black fur. It was thought that the nin'vit's hunted and ate people by entering them and causing illness. To placate the nin'vit's, the Koryaks
